

A HIGHLY COMMENDED OPERATOR

stands out from the crowd!

When the potato leaves the paddock they are **0.1% fat!**

When the potato leaves the process manufacturing plant they are **3 - 5% fat!**

WHERE THE DAMAGE IS DONE
Incorrect technique means fat is unnecessarily added

By the time the chip is ready to eat, depending on the skill of the operator, it can be anything up to **22% fat!**

Our shop is HIGHLY COMMENDED, which means we are fully trained in Industry Standards and are skilled operators.

Our chips have been tested in an independent laboratory and, on the day we had a fat content less than 9%*!

THIS IS AWESOME!

We are proud to cook you the best chips that we can.

*Chips tested July 2013

The Chip Group is an industry collaboration made up of Potatoes New Zealand, chip and oil manufacturers and equipment suppliers.

Their activities are supported by Heart Foundation and Ministry of Health.
